A) Complete the square in the
denominator. $8 - 2x - x^2 = 8 -$
 $(2x + x^2) = 8 - ((x + 1)^2 - 1)$
 $= 9 - (x + 1)^2$. Then the
integral is in the standard form.
Let $u = x + 1$ so that $\frac{du}{dx} = 1$.
 $\int \frac{1}{9 - (x + 1)^2} dx = \int \frac{1}{9 - u^2} du = \arcsin. .$

$v^2 = w^2 (a^2 - x^2)$ where v is the
velocity of the particle, a is the
amplitude and x is the distance
from O . From this equation, we
can see that the velocity is
maximised when $x = 0$, since v^2
 $= w^2 a^2 - w^2 x^2$ Hence the
maximum velocity is aw (put $x =$
 0 in the above equation and take
the square root).

~~Simple Harmonic Motion – Maths
A-Level Revision~~

AS Maths and AS Further Maths
AS maths/further maths: for first
teaching from September 2017.

AS maths is normally studied
after doing GCSE maths in UK
schools and colleges and is a 1
year course, unlike A-level maths
which is a 2 year course.. As part
of the course, candidates will
study pure Maths along with
statistics and mechanics.
