NCA Review for Clinical Laboratory Sciences: Beck, Susan J ...

NCA was chartered in 1978 as a peer-review credentialing agency in response to concerns for pathologists' control of the clinical laboratory science (CLS) profession and has functioned as an independent agency sponsored by the American Society for Clinical Laboratory Science (ASCLS) and the Association of Genetic Technologists. Generalist certifications through NCA lead to the Clinical Laboratory Scientist [CLS (NCA)] and Clinical Laboratory Technician [CLT (NCA)] credentials.

Designed in an easy-to-follow outline format with numerous illustrations for added support, this comprehensive preparatory guide offers today's health professionals a balanced review of all clinical laboratory science subjects tested by today's certifying agencies including ASCP, AMT, and NCA. Thoroughly reviews urinalysis, hematology, coagulation, clinical chemistry, immunology/serology, blood banking, bacteriology, microbiology, and educational/management/research. Structures material in an clear, outline format, offering detailed, systematic information on traditional primary as well as secondary CLS subject matter. Presents simple visuals that depict such topics as hematology, parasitology, mycology, and urinalysis and aid readers in identifying basic cell morphologies and organisms. Includes charts, graphs, and line drawings to further enrich understanding, and provides key objectives and review questions for each chapter.For nurses, PTs, OTs, and physician assistants; also provides a thorough review for medical students in clinical pathology.Previously announced in the 6/02 catalog.

First multi-year cumulation covers six years: 1965-70.

The Second Edition offers a concise review of all areas of clinical lab science, including the standard areas, such as hematology, chemistry, hemostasis, immunohematology, clinical microbiology, parasitology, urinalysis and more, as well as lab management, lab government regulations, and quality assurance. A companion website offers 35 case studies, an image bank of color images, and a quiz bank with 500 questions in certification format.

Over 7,500 terms, definitions, and acronyms for medical insurance, billing and coding (MIBC) make this the perfect pocket dictionary for both students and practitioners in the MIBC professions! With its small size and concise definitions, this dictionary is ideal for use in class and in the medical office. Practical, consistent alphabetical organization with no subentries and screened thumb tabs make it easy to find the information you need. Etymologies for most entries help you understand the origins of the terminology and build your professional vocabulary. A list of commonly used abbreviations printed in the front and back covers make this your go-to reference for everyday practice.

Largely reorganised and much expanded in this second edition, Practice and Procedures brings together in a single volume general methods of pain assessment and presents the wide range of therapies that can be provided by a range of health care disciplines. Authored by a multidisciplinary team of experts, chapters can stand alone for readers looking for a general overview of the methods of techniques for pain management available to them or work to complement chapters in the preceding three volumes, providing practical procedures and applications in the management of acute, chronic and cancer pain. The book is divided into three parts. Part One covers the principles of measurement and diagnosis, including history taking and examination, the selection of pain measures, diagnostic tests and novel imaging techniques. Part Two discusses the full range of therapeutic protocols available, from pharmacological therapies, through psychological techniques, physical therapy and international procedures, to techniques specific to pain assessment and management in paediatric patients. Part Three provides information on planning, conducting, analysing and publishing clinical trials, with invaluable guidance on the techniques of systematic review and meta-analysis in pain research. Part Four considers the role of multidisciplinary pain management teams, their organization, their place within different health care systems, and how best to manage change when implementing such a service. Part Five concludes the volume, investigating the use of guidelines, standards and quality improvement initiatives in the management of post-operative pain, and discussing the expert medicolegal report.
