Outre des compléments utiles portant sur les habitats et les modes de vie, cet ouvrage s'enrichit des nombreux apports génétiques qui ont parfois « révolutionné » les concepts anciens relatifs aux origines paléo-historiques et paléo-géographiques des espèces. Advances in numerical simulation and

prediction in disciplines as diverse as geophysical fluid dynamics, heat transfer, and nuclear and plasma physics have generated, in recent years, considerable interest in the method of solution for Poisson-type equations. A method for the solution of Poisson's equation on the surface of a sphere is given. The method makes use of truncated double Fourier series expansions on the sphere and invokes the Galerkin approximation. It has an operation count of approximately $12(J^2)(1 + \log_2 J)$ for a latitude-longitude grid containing $2J \times (J-1) + 2$ data points. Numerical results are
