Therapy Physicians  
ozone therapy. It then describes how his years of successful experience with it in a wide variety of medical conditions compelled him to discover how and why the therapy works so well. Ozone is a highly reactive form of oxygen. So he theorized that it works by enhancing the utilization of oxygen in the cells. In order

# File Type PDF Principles Applications Ozone

to determine if he was on the right track, he developed a system which uses an FDA approved pulmonary gas analyzer to measure oxygen utilization. Then he began using that system in all of his patients. He discovered two unsuspected findings: • First, many people, even those who feel great, are in a state of decreased oxygen

# File Type PDF Principles Applications Ozone

utilization. They have plenty of oxygen in their bodies, but they are not using it efficiently. • Second, ozone therapy tends to correct this condition. Based on these observations, Dr. Shallenberger then developed an entirely new paradigm for what causes disease and aging. He believes that the primary cause is

decreased oxygen utilization. He presents biochemical and physiological evidence for this assertion. And then also presents evidence for how and why ozone therapy improve oxygen utilization, and in so doing, is instrumental in the treatment of many otherwise incurable medical conditions. The list includes

cardiovascular diseases, chronic infections such as herpes and hepatitis C, macular degeneration, dental infections, chronic pain syndromes, degenerative joint conditions, and autoimmune diseases. Dr. Shallenberger shares his experiences with treating these diseases, and offers specific ozone therapy protocols which he has

found to be effective. Dr. Shallenberger does not look at ozone therapy as a “magic bullet”. Instead he describes how it can be integrated with conventional approaches to yield better results. Dr. Shallenberger has been practicing primary care medicine since 1974. He is the Medical Director of The Nevada Center for Alternative and

In 1991 he began training physicians in America and around the world in the various applications that he found ozone therapy to be so useful in. He has been teaching this course ever since. In

1995, Dr. Shallenberger developed a technique for pain management and joint reconstruction using a combination of ozone therapy and homeopathic therapy which he called Prolozone®. Now, hundreds of physicians from around the world are using this protocol to help their patients who suffer from chronic pain and

degenerative joint disease. In 2010, Dr. Shallenberger was one of the original signers to The Madrid Declaration on Ozonotherapy. The Madrid Declaration was the first document to establish international scientific standards for ozone therapy. Later in 2010, he was selected to become a board member of the

Oxygen-Ozone therapy is a complementary approach less known than homeopathy and acupuncture because it has come of age only three decades ago. This book clarifies that, in the often nebulous field of natural medicine, the biological bases of ozone therapy are

totally in line with classical biochemistry, physiological and pharmacological knowledge. Ozone is an oxidizing molecule, a sort of super active oxygen, which, by reacting with blood components generates a number of chemical messengers responsible for activating crucial biological functions such as

oxygen delivery, immune activation, release of hormones and induction of antioxidant enzymes, which is an exceptional property for correcting the chronic oxidative stress present in atherosclerosis, diabetes and cancer. Moreover, by inducing nitric oxide synthase, ozone therapy may mobilize

When properly used as a real drug within therapeutic range, ozone therapy does not only does not procure adverse effects but

With the advent of the Safe Drinking Water Act Amendments of 1986, many water utilities are reexamining their water treatment practices. Upcoming new regulations on disinfection and on disinfection by-products, in particular, are

the primary driving forces for the big interest in ozone. It appears that ozone, with its strong disinfection capabilities, and apparently lower levels of disinfection by-products (compared to other disinfectants), may be the oxidant/disinfectant of choice.
