Each day a new law or regulation affects the way respiratory therapists perform their jobs. This basic legal guide contains the extensive information respiratory therapists need to know about the court system, lawyers, law, and litigation. Written by the author, a lawyer and therapist with 13 years of clinical experience ranging from floor therapy to administrative and management functions, this book combines the author's knowledge of the complex interactions in the legal system and how the legal system relates to therapy delivered at the bedside. A resource for students and professionals, the book presents 16 areas of the law, including medical negligence, hospital law and employment law. The text also contains a series of questions and answers about the subject areas of the law, and provides extensive guidance for therapists navigating the treacherous currents of ever changing laws. This is a book for anyone who treats respiratory therapy patients or manages therapists. Most legal texts are written either by non-lawyers or non-therapists. Non-lawyers do not understand the complex interactions in the legal system, and are not permitted to give advice. Non-therapists may understand the law very well, but be unable to relate to how therapy is delivered at the bedside. This book is written by a therapist who is a lawyer, and who has been at the bedside. With thirteen years of clinical experience ranging from floor-therapy to administration and management functions, the author understands how a hospital works. The result is a book that is useful both as a course-book and as a reference.

A new edition of the classic text, Respiratory Care: Principles and Practice, Second Edition is a truly authoritative text for respiratory care students who desire a complete and up to date exploration of the technical and professional aspects of respiratory care. With foundations in evidence-based practice, this essential text reviews respiratory assessment, respiratory therapeutics, respiratory diseases, basic sciences and their application to respiratory care, the respiratory care profession, and much more. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

A realistic look at treating respiratory diseases! *Clinical Manifestations and Assessment of Respiratory Disease*, 8th Edition gives you a fundamental knowledge and understanding that is required to successfully assess and treat patients with respiratory diseases. Using a unique organization of material, this full-color text is divided into three distinct areas which show you how to first gather clinical data, then formulate assessments, make objective evaluations, identify desired outcomes, design a safe and effective treatment plan, and finally document all steps. With easy-to-follow language and relevant clinical scenarios, you will gain a firm understanding of why certain treatment modalities are applied. New to this edition is a chapter detailing Respiratory Insufficiency in the Patient with Neuro-Respiratory Disease, along with revised content which takes a deeper dive into latest developments, research, and practices and protocols in the treatment of respiratory disease. Revised content in the disease sections reflect the latest developments, research, and practices and protocols in the treatment of respiratory disease. UPDATED! Case studies on Evolve provide realistic examples of the respiratory therapist's role in successful patient care and help you apply text information to clinical assessment and treatment. UNIQUE! Emphasis on clinical scenarios and critical thinking skills helps students understand the causes of the clinical manifestations activated by specific respiratory disorders. UNIQUE! Focus on assessment and Therapist-Driven Protocols (TDPs) emphasizes industry-approved standards of care, providing you with the knowledge and skills to implement these protocols into patient care. Overview boxes summarize the clinical manifestations caused by the pathophysiologic mechanisms of each disorder. Self-assessment questions at the end of the text help you to personally assess your understanding of chapter material. Student-friendly features reinforce learning with chapter outlines, objectives, key terms, and easy-to-follow language. NEW! Respiratory Insufficiency in the Patient with Neuro-Respiratory Disease chapter outlines the respiratory therapist's role in regard to these protocols. NEW! Illustrations in designated chapters ensures you have a visual representation of disease processes, and the latest assessment and treatment procedures.

Ideal for fellows and practicing pulmonologists who need an authoritative, comprehensive reference on all aspects of pulmonary medicine, Murray and Nadel's *Textbook of Respiratory Medicine* offers the most definitive content on basic science, diagnosis, evaluation and treatment of the full spectrum of respiratory diseases. Full-color design enhances teaching points and highlights challenging concepts. Understand clinical applications and the scientific principles of respiratory medicine. Detailed explanations of each disease entity allow you to work through differential diagnoses. Key Points and Key Reading sections highlight the most useful references and resources for each chapter. An expanded sleep section now covers four chapters and includes control of breathing, consequences of sleep disruption, as well as obstructive and central apnea. New chapters in the Critical Care section cover Noninvasive Ventilation (NIV) and Extracorporeal Support of Gas Exchange (ECMO). New chapters focusing on diagnostic techniques now include Invasive Diagnostic Imaging and Image-Guided Interventions and Positron Emission Tomography, and a new chapter on Therapeutic Bronchoscopy highlights the interventional role of pulmonologists.

Master the patient assessment skills you need to provide effective respiratory therapy! Wilkins' *Clinical Assessment in Respiratory Care*, 7th Edition prepares you to assist physicians as they make treatment decisions, evaluate the effectiveness of treatment, and determine if changes in the treatment need to be made. This edition expands coverage of infection control and cardiopulmonary symptoms, and follows a more logical progression through the many aspects of assessment. Written by Dr. Albert Heuer and Dr. Craig Scanlan, this comprehensive resource also helps you prepare for the NBRC CRT and RRT credentialing exams by cross-referencing material within the book to the NBRC exam matrices. A comprehensive approach covers all of the most important aspects of assessment, so you can assess patients effectively. Case studies offer real-life clinical scenarios challenging you to interpret data and make accurate patient assessments. Assessment questions help you review by reflecting the learning objectives and the NBRC Exam format, with answers including rationales for correct answer options. Ask Yourself boxes list questions that you should ask patients (e.g., coughing, sputum, shortness of breath) or ask yourself (e.g., lung sounds you are hearing, blood pressure, respiratory rate). Simply Stated boxes highlight and promote understanding of important concepts. Learning objectives, chapter outlines, chapter overviews, and key terms lists begin each chapter, preparing you for the key topics and content you will learn. Key Point summaries at the end of each chapter emphasize the learning objectives and provide an overview of important material. NEW! Correlation of content to the NBRC combined CRT/RRT exam matrices is provided on the Evolve companion website, helping you prepare for these difficult exams by cross-referencing material within the book to the NBRC exam matrices for the CRT and RRT credentialing exams. NEW! Emphasis on infection control includes expanded content on topics such as the prevention and treatment of VAP (ventilator-associated pneumonia) and nosocomial infections in the hospital and home setting. NEW or expanded coverage includes cardiopulmonary symptoms, neurologic assessment, blood gas interpretation, and Electronic Medical Records (EMR). NEW! Expert authors Albert Heuer and Craig Scanlan are well-known, recognized educators in the field of respiratory therapy. NEW! List of common abbreviations on the inside front cover offers quick and easy access to abbreviations and acronyms used in the text and throughout the profession.
